Dear Parents:

Below you will find a list of concepts that your child will use and understand while completing Unit 7 Solving Systems of Equations. Also included are references, vocabulary and examples that will help you assist your child at home.

Concepts Students will Use and Understand

- Analyze and solve systems of linear equations.
- Understand and solve systems of equations graphically and algebraically, using technology as appropriate.
- Solve real-world problems leading to two linear equations with two variables.

Vocabulary

Coefficients: a numerical factor in a term of an algebraic expression.

Intersecting Lines: lines that have one point in common or all points in common.

Linear Combination Method: a technique for solving a system of equations that involves combining two equations in order to eliminate one of the variables and solving for the remaining variable. Adding, subtracting, or multiplying a system of equations to help solve the system.

Simultaneous equations: Another name for a system of Linear Equations

Substitution Method: a technique for solving a system of equations that involves replacing one variable with an equivalent expression and solving for the remaining variable.

System of Linear Equations: two or more equations that together define a relationship between variables usually in a problem situation. A system of equations can have no solution, one solution, or many solutions.

Solving Systems of Equations

Example 1

Solve the system of equations using any method you choose.

$$2x + y = 7$$

$$x - 3y = 0$$

Example 2

Determine whether either of the points $(-1, -5)$ and $(0, -2)$ is a solution to the given system of equations.

$$y = 3x - 2$$

$$y = -x - 6$$

Example 3

Gustav has 35 dimes and quarters that total \$5.00. Solve a system of equations to find out how many dimes and how many quarters he has.

Key

Example 1

$(3, 1)$

Example 2

To check the given possible solutions, I just plug the x - and y -coordinates into the equations, and check to see if they work.

$(-1, -5)$ is the only point that satisfies both equations so it is a solution.

Example 3

Let d = # of dimes and q = # of quarters

$$d + q = 35 \quad \text{and} \quad 0.1d + 0.25q = 5$$

He has 25 dimes and 10 quarters

Graph a Line Using Intercepts

Standard form is when an equation is written in the form $Ax + By = C$.

Example

State the x - and y -intercepts of $3x + 2y = 6$. Then graph the function.

Step 1 Find the x -intercept.

To find the x -intercept, let $y = 0$.

$3x + 2y = 6$	Write the equation.
$3x + 2(0) = 6$	Replace y with 0.
$3x + 0 = 6$	Multiply.
$3x = 6$	Simplify.
$x = 2$	Divide each side by 3.

The x -intercept is 2.

Step 2 Find the y -intercept.

To find the y -intercept, let $x = 0$.

$3x + 2y = 6$	Write the equation.
$3(0) + 2y = 6$	Replace x with 0.
$0 + 2y = 6$	Multiply.
$2y = 6$	Simplify.
$y = 3$	Divide each side by 2.

The y -intercept is 3.

Step 3 Graph the points $(2, 0)$ and $(0, 3)$ on a coordinate plane. Then connect the points.

Exercises

State the x - and y -intercepts of each function. Then graph the function.

1. $3x + 5y = -15$

2. $-2x + y = 8$

3. $-4x - 3y = -12$

Extra Practice

Graph a Line Using Intercepts

State the x - and y -intercepts of each equation. Then use the intercepts to graph the equation.

1. $3x + y = 9$

2. $-2x + y = 6$

3. $3x - 2y = 12$

4. $2x - y = 6$

5. $2x - 4y = 8$

6. $-5x + y = -10$

7. $6x + 2y = 12$

8. $5x - 2y = 15$

9. $-4x - 3y = 24$

Skills Practice

Graph a Line Using Intercepts

State the x - and y -intercepts of each function. Then graph the function.

1. $3x - 5y = 15$

2. $-\frac{1}{2}x + 3y = -3$

3. $4x - 6y = 12$

4. $7x + 3y = -21$

5. $\frac{2}{3}x - \frac{1}{3}y = 2$

6. $-x + y = -2$

7. **DRINKS** Ms. Purdy bought coffee and orange juice for her coworkers in her office. She bought x cups of coffee at \$2 per cup and y cups of orange juice at \$1.50 per cup. Altogether she spent \$30. This can be represented by the function $2x + 1.5y = 30$. Graph the function. Then interpret the x - and y -intercepts.

Homework Practice

Graph a Line Using Intercepts

State the x - and y -intercepts of each function.

1. $-6x + 8y = 24$

2. $\frac{3}{4}x - 6y = 18$

3. $-\frac{1}{4}x - \frac{1}{3}y = 12$

4. $-10x - 10y = -20$

5. $x + y = 1$

6. $-x - y = \frac{1}{2}$

State the x - and y -intercepts of each function. Then graph the function.

7. $-4x + 2y = -8$

8. $6x - 2y = -18$

9. **FARMING** Mr. Jeans raises cows and chickens on his farm. Altogether, his cows and chickens have 140 legs. This can be represented by the function $4x + 2y = 140$. Graph the function. Then interpret the x - and y -intercepts.

10. **MONEY** Monty has a total of \$290 in ten dollar and five dollar bills. This can be represented by the function $10x + 5y = 290$. Interpret the x - and y -intercepts.

How Do You Solve a System of Equations by Elimination?

Elimination Notes P.1

#1. Make sure equations are in standard form and then look at the coefficients and decide whether x or y would be easiest to eliminate by adding the two equations together. Otherwise, go to #2.

#2. Decide what to multiply each equation by so that when you add the two, a variable will be eliminated. Look for the least common multiple of the coefficients.

#3. Add the two equations together.

#4. Solve for the remaining variable.

#5. Substitute the value back into one of the original equations and solve for the other variable.

14. Is (3, 2) the solution to this system of equations?

$$2x - 3y = 0$$

$$2x + y = 8$$

15. You are walking along the path $y = 6x + 8$. Your friend Rick is walking along $y - 12 = 8x$. At what point do your paths cross?

CONCEPTS REVIEW:

Draw and label the three types of solutions:

List the steps for solving a system of equations by GRAPHING

List the steps for solving a system of equations by SUBSTITUTION

List the steps for solving a system of equations by ELIMINATION

Convert between forms.

○ Convert to Standard form.

1) $y = -2x + 5$

2) $y = \frac{1}{2}x - 3$

Convert to slope intercept form.

3) $12x + 3y = 15$

4) $3x - 12y = 24$
